Lavoro: 1, Via Giulio Cesare Pupilli, 40136 Bologna (Italia)

PRESENTAZIONE

Marco Manzetti è attualmente un medico specializzando in Ortopedia e Traumatologia presso l'IRCCS Istituto Ortopedico Rizzoli, con specializzazione nella chirurgia della colonna vertebrale e nelle scienze ortopediche di base. Dopo essersi laureato con lode in Medicina all'Università di Pisa nel luglio 2018, il Dr. Manzetti ha proseguito la sua formazione avanzata e la ricerca in chirurgia ortopedica. Il suo impegno lo ha portato a partecipare alla Fellowship in equilibrio sagittale e deformità vertebrali presso il CHU di Bordeaux, dove ha lavorato come medico ospite nel Dipartimento di Chirurgia Spinale 2, sotto la supervisione del Prof. Jean Charles Le-Huec. Prima di iniziare la sua specializzazione all'Università di Bologna nel luglio 2019, il Dr. Manzetti ha acquisito esperienza come medico di continuità assistenziale per l'AUSL Toscana Nord-Ovest a metà del 2019. Più recentemente, da novembre 2023 a ottobre 2024, ha ricoperto un ruolo simile nel distretto di Porretta Terme dell'AUSL di Bologna.

Il suo impegno nella chirurgia della colonna vertebrale è stato ulteriormente rafforzato da fellowship internazionali. Da giugno a luglio 2024, ha svolto una AO Spine Fellowship presso la Schulthess Klinik di Zurigo, sotto la guida del Prof. Markus Loibl, seguita da una fellowship aggiuntiva presso l'Universitätsspital di Zurigo nelle prime due settimane di agosto 2024.

Attualmente, il Dr. Manzetti continua la sua specializzazione presso la Clinica di Ortopedia e Traumatologia I, diretta dal Prof. Cesare Faldini, dove è attivamente coinvolto nella cura dei pazienti, nella chirurgia e nella ricerca clinica in ortopedia. Parallelamente al suo lavoro clinico, sta conseguendo un dottorato in Scienze Biomediche e Neuromotorie presso il dipartimento DIBINEM dell'Università di Bologna.

In aggiunta ai suoi doveri clinici e di ricerca, il Dr. Manzetti è anche impegnato nell'insegnamento di Ortopedia e Traumatologia agli studenti dell'Università di Bologna.

ESPERIENZA LAVORATIVA

Part - Time Ordinario

Università di Pisa, Dipartimento di Ricerca Traslationale e delle Nuove Tecnologie in Med. e Chir. [28/02/2017 - 28/02/2018]

Indirizzo: 10, Via Savi, 56126 Pisa (Italia) | **Sito web:** www.med.unipi.it | **Impresa o settore:** Attività amministrative e di servizi di supporto

- Creazione e modifica di documenti
- Creazione di file word, power point ed excel
- Lavoro amministrativo

Medico di Continuità Assistenziale

Azienda USL Toscana Nord Ovest [30/06/2019 - 31/08/2019]

Indirizzo: 530, Via Antonio Fratti, 55049 Viareggio (Italia) | **Sito web:** <https://www.uslnordovest.toscana.it/> | **Impresa o settore:** Sanità e assistenza sociale

Medico Specializzando in Ortopedia e Traumatologia

IRCCS - Istituto Ortopedico Rizzoli [31/10/2019 – Attuale]

Indirizzo: 1, Via Giulio Cesare Pupilli, 40136 Bologna (Italia) | Sito web: <http://www.ior.it/> | Nome dell'unità o del servizio: Medico In Formazione Specialistica In Ortopedia e Traumatologia - Impresa o settore: Sanità e assistenza sociale

PhD Student

Alma Mater Studiorum - Università di Bologna [11/2023 – Attuale]

Città: Bologna | Paese: Italia

ISTRUZIONE E FORMAZIONE

Diploma di Liceo Scientifico (votazione 84/100)

Liceo Scientifico Barsanti e Matteucci [08/2006 – 06/2011]

Indirizzo: 5151, Via IV Novembre, 55049 Viareggio (Italia) | Sito web: www.liceobarsantiematteucci.it | Livello EQF: Livello 4 EQF

Laurea Magistrale in Medicina e Chirurgia

Università di Pisa [08/2012 – 06/2018]

Indirizzo: 10, Via Savi, 56126 Pisa (Italia) | Sito web: www.med.unipi.it | Campi di studio: Salute e assistenza:
• Medicina | Voto finale: 110\110 cum laude | Livello EQF: Livello 7 EQF

Tesi di Laurea Magistrale: Potenzialità della realtà aumentata nello sviluppo di un simulatore ibrido per la chirurgia protesica d'anca: un progetto EndoCas

Relatore: Prof. Paolo D. Parchi

Votazione: 110/110 cum laude

Rappresentante degli Studenti

"Listamina: diretta, pratica, libera" [31/10/2017 – 31/10/2019]

Città: Pisa | Paese: Italia | Sito web: <https://listaminaunipi.wordpress.com/>

Tirocinante ospite presso dipartimento di chirurgia vertebrale; Pr. JC LeHuec CHU Bordeaux

Centre Hospitalier Universitaire de Bordeaux [31/08/2018 – 31/10/2018]

Indirizzo: Place Amélie Raba Léon, 33300 Bordeaux (Francia) | Sito web: <https://www.chu-bordeaux.fr/>

Tirocinio in equilibrio sagittale e in deformità della colonna vertebrale:

- Clinica: 50 pazienti / settimana visti nella clinica del Professore, con esame clinico dei pazienti
- Sala operatoria: 3 giorni / settimana, assistendo o osservando sotto la supervisione del Pr. LeHuec
- Analisi del caso clinico per la presentazione della riunione di reparto ogni settimana
- Conoscenza: comprensione dell'analisi dell'equilibrio sagittale, ha lavorato sull'analisi degli esami radiografici per i valori normativi in uno studio di ricerca

Abilitazione alla Professione di Medico Chirurgo

Università di Pisa [18/02/2019 – Attuale]

Indirizzo: 10, Via Savi, 56126 Pisa (Italia) | Sito web: www.med.unipi.it | Livello EQF: Livello 7 EQF

Medico In Formazione Specialistica in Ortopedia e Traumatologia

Alma Mater Studiorum - Università di Bologna [10/2019 – Attuale]

Power-assisted pedicle screws placement: Is it as safe and as effective as manual technique? Narrative review of the literature and our technique Pedicle screws are the gold standard in spine surgery, allowing a solid tricolunar fixation which is unmatched by hooks and wires. The freehand technique is the most widely adopted for pedicle screws placing. While freehand technique has been classically performed with manual tools, there has been a recent trend toward the use of power tools. The aim of this review is to summarize and expose potential risks and advantages of power pedicle screws placing.

Simultaneous Selective Thoracic Fusion of Lenke-1C Scoliosis and Reduction of Symptomatic Spondylolisthesis: A Case Report The combined treatment of unrelated Lenke-1C curves and spondylolisthesis represents a challenge: The two arthrodesis areas must achieve corrections while preserving mobility as much as possible. We reported a case of 20-year-old girl with Lenke-1C scoliosis and Meyerding grade-2 symptomatic L5-S1 isthmic spondylolisthesis.

Surgical treatment of scoliosis in Ullrich Congenital Muscular Dystrophy: a case series of 3 patients Scoliosis in Ullrich Congenital Muscular Dystrophy (UCMD) is very common, with a reported incidence of more than 50%, and it is rapidly progressive. There are no previous studies which specifically focus on scoliosis surgery in UCMD patients. This article reports three cases of scoliosis surgery in UCMD, focusing on operative course, clinical and radiological results achieved, fusion area and complications, with a 2-year follow-up.

Resumption of sport after spinal fusion for adolescent idiopathic scoliosis: a review of the current literature

Adolescent idiopathic scoliosis (AIS) is a frequent disorder. Since patients with AIS are typically as active as age-matched controls and post-operative reduction in physical activity has detrimental effects on their well-being, return to sport (RTS) is an important perioperative concern. Aim of the present study is to review the literature concerning return to sport after spinal fusion for AIS.

Epigenetic and genetic factors related to curve progression in adolescent idiopathic scoliosis: a systematic review of the current literature Adolescent idiopathic scoliosis (AIS) is a progressive deformity of the spine. Scoliotic curves progress until skeletal maturity leading, in rare cases, to a severe deformity. While the Cobb angle is a straightforward tool in initial curve magnitude measurement, assessing the risk of curve progression at the time of diagnosis may be more challenging. Epigenetic and genetic markers are potential prognostic tools to predict curve progression. The aim of this study is to review the available literature regarding the epigenetic and genetic factors associated with the risk of AIS curve progression.

Allogenic Bone grafts and postoperative surgical site infection: are positive intraoperative swab cultures predictive for a higher infectious risk? In spine surgery, allogenic bone grafts are often required to ensure bone fusion, but the main concern regarding their use is the infection risk: therefore, an intraoperative swab on their surface for culture test is performed. The cost-effectiveness of these swabs and their influence on the patients' post-operative course have often been questioned. The aim of this study is to determine whether positive spine allograft culture results are predictive of an increased risk of surgical site infection and whether they influence the surgeon's treatment choices.

5.5mm Cobalt-Chrome vs 6mm Titanium Alloy rods in surgical treatment of Lenke 1 Adolescent Idiopathic Scoliosis with high density pedicle screws and Direct Vertebral Rotation on differently shaped rods: a Retrospective Comparative Cohort Study The gold standard of surgical treatment of Adolescent Idiopathic Scoliosis (AIS) consist of a posterior approach requiring complex 3-dimensional correction with multisegmental pedicle screws attached to two contoured rods. The substantial corrective forces and the ability of the rod to withstand these forces rely on its biomechanical properties. The aim of this study is to compare outcomes of 5.5mm Cobalt-Chrome (CoCr) and 6mm Titanium alloy (TiAl) rods in surgical correction in Lenke 1 AIS patients.

Total knee replacements using rotating hinge implants in polio patients: clinical and functional outcomes Little evidences are available in the literature concerning the outcomes of total knee replacement (TKR) in poliomyelitis patients with severe knee deformities or degeneration. Encouraging results have been reported concerning the use of constrained implants, i.e., rotating hinge knee prosthesis (RHK), compared to less constrained ones. The purpose of this paper is to report our experience with rotating hinge total knee replacement, using only RHK prosthesis, to determine functional results, complications, and survival of TKR in poliomyelitis patients.

Epigenetic Factors Related to Low Back Pain: A Systematic Review of the Current Literature Low back pain (LBP) is one of the most common causes of pain and disability. At present, treatment and interventions for acute and chronic low back pain often fail to provide sufficient levels of pain relief, and full functional restoration can be challenging. Considering the significant socio-economic burden and risk-to-benefit ratio of medical and surgical intervention in low back pain patients, the identification of reliable biomarkers such as epigenetic factors associated with low back pain could be useful in clinical practice. The aim of this study was to review the available literature regarding the epigenetic factors associated with low back pain.

[2023]

Mechanobiology of the Human Intervertebral Disc: Systematic Review of the Literature and Future Perspectives

Low back pain is an extremely common condition with severe consequences. Among its potential specific causes, degenerative disc disease (DDD) is one of the most frequently observed. Mechanobiology is an emerging science studying the interplay between mechanical stimuli and the biological behavior of cells and tissues. The aim of the presented study is to review, with a systematic approach, the existing literature regarding the mechanobiology of the human intervertebral disc (IVD), define the main pathways involved in DDD and identify novel potential therapeutic targets.

[2023]

Complications after Posterior Lumbar Fusion for Degenerative Disc Disease: Sarcopenia and Osteopenia as Independent Risk Factors for Infection and Proximal Junctional Disease

Proximal Junctional Disease (PJD) and Surgical Site Infection (SSI) are among the most common complications following spine surgery. Their risk factors are not fully understood. Among them, sarcopenia and osteopenia have recently been attracting interest. The aim of this study is to evaluate their influence on mechanical or infective complications after lumbar spine fusion.

Osteoid Osteoma of the Hand: Surgical Treatment versus CT-Guided Percutaneous Radiofrequency Thermal Ablation Osteoid osteoma (OO) is one of the most common benign bone tumors. This type of osteogenic tumor is generally characterized by a well-defined lytic area with a vascularized central nidus surrounded by sclerosis and bone thickening. The wrist and hand bones are infrequent sites for osteoid osteoma: only 10% of the cases arise in these areas. Standard treatments are surgical excision and radio-frequency ablation (RFA), both with advantages and disadvantages. This study aimed to compare the two techniques to prove if RFA could be a potential alternative to surgery in the treatment of OO of the hand.

Is there a skeletal age index that can predict accurate curve progression in adolescent idiopathic scoliosis? A systematic review The diagnosis of adolescent idiopathic scoliosis requires clinical and radiographic evaluation; the management options vary depending on the severity of the curve and potential for progression. Identifying predictors of scoliosis progression is crucial to avoid incorrect management; clinical and radiographic factors have been studied as potential predictors. The present study aims to review the literature on radiological indexes for the peak height velocity or curve acceleration phase to help clinicians manage treatment of patients with adolescent idiopathic scoliosis.

Pedicle Dysplasia in Proximal Thoracic Adolescent Idiopathic Scoliosis Curves: What are We Missing and What are its Possible Surgical Implications? An Observational Retrospective Study on 104 Patients To assess if pedicle dysplasia is present in proximal thoracic (PT), both structural and nonstructural, compared to main thoracic (MT) curves; and to assess if it is predictive of radiographic outcomes at minimum 2 years of follow-up.

Global Spine Journal

[2024]

A Pilot Study on Circulating, Cellular, and Tissue Biomarkers in Osteosarcopenic Patients This study aimed to explore circulating, cellular, and tissue biomarkers in osteosarcopenic (OS) patients comparing them with healthy, osteopenic (OP), and sarcopenic (SP) patients. In detail, we analyzed and evaluated routine blood test parameters, peripheral blood mononuclear cells (PBMCs), spontaneous osteoclastogenesis (the activation of osteoclasts without specific external stimulation or inducement, a risk factor in pathological conditions characterized by altered BMD), bone and muscle micro-architecture, and physiological and pathological expression of blood serum and tissue markers including those for bone, muscle, and aging.

REVIEWER RIVISTE ORTOPEDICHE INTERNAZIONALI

[30/04/2020 – Attuale]

Spine

Scope of the journal:

Spine is a peer-reviewed, multidisciplinary journal directed to an audience of spine physicians and scientists. The journal publishes original articles in the form of clinical and basic research. *Spine* will only publish studies that have institutional review board (IRB) or similar ethics committee approval for human and animal studies and have strictly observed a sufficient follow-up period. With the exception of reference presentation, *Spine* requires that all manuscripts be prepared in accordance with the Uniform Requirements for Manuscripts Submitted to Biomedical Journals.

[2021 – Attuale]

Musculoskeletal Surgery – formerly La Chirurgia degli Organi di Movimento

Musculoskeletal Surgery – formerly La Chirurgia degli Organi di Movimento, founded in 1917 at the Istituto Ortopedico Rizzoli – is a peer-reviewed journal published three times a year. The Journal provides up-to-date

information for clinicians and scientists through the publication of original papers and reviews dealing with the pathogenesis and treatment of orthopaedic conditions. At a time when the number of specialty journals is increasing, Musculoskeletal Surgery will continue to fulfil its special role as a general orthopaedic journal. The aim, reflecting the vision of the founder, Prof. Vittorio Putti, is to contribute to orthopaedic knowledge through solid scientific publications that help orthopaedic surgeons in their current practice. The Journal is international in both scope and readership, as reflected by its editorial team and contributors, who include experts from around the globe. The Journal is indexed in PubMed/MEDLINE and is available in electronic format at www.springerlink.com.

[29/12/2022 – Attuale]

International Journal of Environmental Research and Public Health

International Journal of Environmental Research and Public Health is an interdisciplinary, peer-reviewed, open access journal published semimonthly online by MDPI. It covers Environmental Sciences and Engineering, Public Health, Environmental Health, Occupational Hygiene, Health Economic and Global Health Research, etc. The International Society Doctors for the Environment (ISDE) and Italian Society of Environmental Medicine (SIMA) are affiliated with IJERPH and their members receive a discount on the article processing charges.

Link: https://www.mdpi.com/journal/ijerph/submission_reviewers

[09/02/2023 – Attuale]

Healthcare

Healthcare (ISSN 2227-9032) is an international, scientific, open access journal on health care systems, industry, technology, policy, and regulation, and is published quarterly online by MDPI.

ISSN: [2227-9032](https://www.mdpi.com/journal/healthcare)

Link: <https://www.mdpi.com/journal/healthcare>

[17/03/2023 – Attuale]

Journal of Personalized Medicine

Journal of Personalized Medicine (JPM; ISSN 2075-4426) is an international, open access journal aimed at bringing all aspects of personalized medicine to one platform. *JPM* publishes cutting edge, innovative preclinical and translational scientific research and technologies related to personalized medicine (e.g., precision medicine, pharmacogenomics/ proteomics, systems biology, 'omics association analysis).

Link: <https://www.mdpi.com/journal/jpm>

[04/2023 – Attuale]

International Journal of Molecular Sciences

The International Journal of Molecular Sciences (ISSN 1422-0067) provides an advanced forum for chemistry, molecular physics (chemical physics and physical chemistry) and molecular biology. It publishes research articles, reviews, communications and short notes. Our aim is to encourage scientists to publish their theoretical and experimental results in as much detail as possible. Therefore, there is no restriction on the length of the papers or the number of electronics supplementary files. For articles with computational results, the full experimental details must be provided so that the results can be reproduced. Electronic files regarding the full details of the calculation and experimental procedure, if unable to be published in a normal way, can be deposited as supplementary material (including animated pictures, videos, interactive Excel sheets, software executables and others).

ISSN: [1422-0067](https://www.mdpi.com/journal/molecules)

Link: <https://www.mdpi.com/journal/ijms>

[05/2023 – Attuale]

Journal of Clinical Medicine

Journal of Clinical Medicine (ISSN 2077-0383), is an international scientific open access journal, providing a platform for advances in health care/clinical practices, the study of direct observation of patients and general medical research. This multi-disciplinary journal is aimed at a wide audience of medical researchers and healthcare professionals. Unique features of this journal: manuscripts regarding original research and ideas will be particularly welcomed. JCM also accepts reviews, communications, and short notes. There is no limit to publication length: our aim is to encourage scientists to publish their experimental and theoretical results in as much detail as possible. ISSN: [2077-0383](https://www.mdpi.com/journal/ijms)

Link: <https://www.mdpi.com/journal/jcm>

[14/06/2023 – Attuale]

Global Spine Journal

Global Spine Journal (GSJ) is an [open access](#), peer-reviewed journal which focuses on the study and treatment of spinal disorders, including diagnosis, operative and non-operative treatment options, surgical techniques, and emerging research and clinical developments.

Link: <https://journals.sagepub.com/description/GSJ>

[29/09/2023 – Attuale]

Frontiers in Surgery

A multidisciplinary journal which explores surgical practices - from fundamental principles to advances in microsurgery and minimally invasive techniques. It fosters innovation and improves the clinical management of patients.

Link: <https://www.frontiersin.org/journals/surgery>

[Attuale]

Archives of Orthopaedic and Trauma Surgery

Archives of Orthopaedic and Trauma Surgery is a rich source for research and clinical practice in the field of orthopaedics and traumatology:

- Publishes papers dealing with diseases and injuries of the musculoskeletal system.
- Places special emphasis on clinical relevance.
- Serves the information needs of orthopaedic clinicians and practitioners.

CORSI E ATTESTATI

[01/04/2023 – 27/05/2023]

AO Spine Online Course— The MISS Spectrum Series

Goal of the course

This course covers Minimally Invasive Spine Surgery (MISS), starting with indications and general skills and moving to specific procedures with the areas of microscopic, endoscopic, and instrumented procedures. All content is presented in a standardized fashion based on the AO Spine MISS Curriculum and published nomenclature.

Learning objectives

On completion of this course, participants will be able to:

- Diagnose the patient problem correlating the clinical findings with imaging and work up
- Recognize appropriate indications based on your skill set and case experience
- Select appropriate MISS procedure for the pathology and indication
- Recognize when MISS is not an appropriate option
- Describe how to set up the technology, operating room, and the team for MISS procedures
- Describe the phases and steps for core microscopic, endoscopic, and instrumented MISS procedures
- Describe how to manage complications and apply a backup plan

Course description

The online course is delivered as a series of self-directed learning activities and resources, combined with 4 live online hours of 1 hour. Readings and prerecorded presentations are viewed to prepare for 3 synchronous (live) online small group discussions, which are led by international experts in the various areas of MISS. Additional AO Spine resources such as Surgery Reference, and MyAO case application, and case uploading are integrated in the learning experience.

Current Concepts in Spine Deformity Course

Presented in collaboration with the Scoliosis Research Society and EUROSPINE, the current concepts courses offer a unique opportunity to learn from esteemed experts at the forefront of spinal deformity research and treatment.

Learning Objectives

Upon completion of this course, participants should be able to:

- Describe the biomechanical principles of spinal deformities.
- Classify and identify indications for scoliotic patients of varying ages including neuromuscular and kyphotic cases.
- Formulate a pre-operative plan and analyze its results post operatively for spinal deformity cases.
- Recognize and associate appropriate treatment options for varying spine deformity patients.
- Analyze factors that lead to complications and apply complication prevention strategies for differing procedures and approaches for spine deformity treatment.
