Research statement

Research interests

As an environmental engineer with a strong background in hydrology, I am deeply interested in the analysis of hydrological processes related to ecological and human activities both on a local and on a basin-scale perspective. So far, my research activity has been mainly focused on (i) river flow dynamics, being one of the main controls of fluvial ecosystem processes, (ii) flood risk assessment, and (iii) anthropogenic and hydrologic interactions.

Research activities

Stochastic analysis of hydrologic and hydraulic variables
Ecohydrological experimental activity
Stream ecology
Hydropower production
Analysis of remote sensing data for water resources sustainability and water-related risks
Flood risk assessment
Anthropogenic and hydrologic interactions
